STANDARD MARKET WEIGHTS OF PRODUCE

	Lbs.		Lbs.
Wheat (per bu.)	60	Oats (per bu.)	32
Corn, in the ear (per bu.)	70	White potatoes (per bu.)	60

LUMBER

Lumber is measured by the board foot. The standard board foot is a piece of lumber *a foot long, a foot wide,* and *an inch thick.*

To find the number of board feet in a piece of lumber multiply the *length in feet,* by the *width in feet,* by the *thickness in inches.*

Lumber is sold by the thousand (M) board feet. A studding 2″ × 4″ × 12′ contains 8 board feet. At $50 per M it is worth $0.40.

CIRCULAR MEASURE

60 seconds (″) = 1 minute (′)
60 minutes = 1 degree (°)
360 degrees = 1 circle
90 degrees = 1 right angle

Angles are measured with a *protractor.* The protractor is placed with its center exactly on the point of the angle. It is turned about this point until its base line falls along one side of the angle. The scale is read at the point where the other side of the angle crosses it. This is the measure of the angle in degrees. (See figure below.)
